(a) Target to candidate
Disease and mechanism
Causal relevance
Correlation as mechanism
Target identification
Actionable entity
Identity collapse
Target validation
Phenotype change
Evidence reuse
Assay and data strategy
Optimisation quantity
Pooled endpoints
Hit discovery
Confirmation worth
Retrospective as prospective
Hit confirmation
Attributable activity
Artefact as binding
Hit-to-lead
Series headroom
Endpoint loss
Lead optimisation
Trade-off worth
Scalar hides liability
Candidate nomination
Package coherence
Confidence as experiment
narrowing
candidates
rejected branch
failure mode
