(a) Stage evidence
Disease and mechanism
cohort
tissue
perturbation
time
phenotype
confounders
Target identification
stable IDs
isoform/state
direction
disease context
Target validation
intervention
dose
model system
rescue or orthogonal evidence
Assay and data strategy
protocol
units
censoring
controls
batch
provenance
Hit discovery
search space
target state
selection budget
prospective test
Hit confirmation
orthogonal assay
purity
interference checks
concentration response
Hit-to-lead
series identity
potency
selectivity
exposure
synthesis
Lead optimisation
multi-parameter objectives
uncertainty
constraints
synthesis cycle
Candidate nomination
integrated efficacy
safety
DMPK
CMC
translational rationale
